

MSOL BIO-TREAT

FUNGUS REMOVER

Bio Treat is formulated low toxicity biocides and surfactants , which is to be applied to the exterior/ interior surfaces of the walls where there is high humidity content. The composition is non-metallic , formaldehyde free and biodegradable , hence environmental friendly .

PRIMARY USES :

Mol Bio –Treat is used for removal and prevention of bacteria , algae, moss and moulds , growing on roofs , walls, fence , monuments ,etc.

DIRECTION OF USES :

Area to which Bio –Treat is to be applied must be surface dry . On vertical surfaces apply by brush or spray with low- pressure pneumatic pumps .

Thoroughly work the material into surface particularly in any cracks or crevices

On horizontal surfaces it may also be applied using a watering can .. After 24 hours of the application of Bio-Treat scrub the entire surface with stiff brush or broom , clean the surface with water .

In case of very thick growth two applications may be necessary . Remove growth killed by the first treatment after 7 days before applying second treatment .

TECHNICAL DATA :

Color	-Light blue colored liquid
Sp. Gravity at 25°C±2°C	-0.99±0.01
pH	-7 to 8
Drying time	- 2 to 4 hours depending on climatic conditions.
Coverage	-20 to 40 sq. ft. litre depending on surface condition
Cleaning	-Clean equipment with water after use

PACKAGING :

1 litre, 5litre

STORAGE :

Minimum shelf life of 24 months to be stored in original sealed container between 10°C and 40°C.

SAFETY PRECAUTIONS :

Mol Bio-Treat is low toxicity , irritating liquid . Avoid direct contact with skin , eyes and mucous membranes .
