

MTAN AKM

Mtan AKM is an anionic synthetic auxiliary tanning agent especially recommended for neutralization.

Characteristics :

Chemical nature : Based on aromatic condensation products, buffering and complex active compounds.

Appearance : Cream coloured powder.

Solubility : Readily soluble in water.

Concentration : 96%

pH (5g/lt.) : 7.0-7.5

Properties : Mtan AKM gives good results in the retanning and dyeing of chrome leathers and also in other mineral tanned leathers. Besides having special auxiliary tanning materials, Mtan AKM also contains complex active salts of organic acids which have a very good neutralizing effect. Mtan AKM is anionic and hence is fixed by chrome leather and other mineral tanned leathers.
